

YAKU SOLUCIONES SOCIOAMBIENTALES EIRL. (YAKUSS) is a company created to offer our clients innovative and profitable results to their requirements. We work respecting the current technical standards, the demands of quality and safety, ensuring ourselves of fulfilling the needs of our clients. We have professionals of experience and excellence in the diverse areas that we develop.

Our teamwork has participated in mining, energy, electricity, transportation, among other public and private sectors, in the different departments of Peru and abroad. Likewise, our professionals participate actively in the field of research and have a wide scientific production.

SERVICES

Biodiversity

We perform assessments of alpha, beta and gamma biological diversity, studies of basic ecology and characterization of terrestrial and aquatic ecosystems, as well as the services they provide. We prepare plans for the conservation and management of natural resources as well as the guidelines for the master plans of private and public natural areas of SERNARP.

We also perform taxonomic identifications of macro and microscopic plants and animals.

Research and training

We prepare environmental, scientific and technical educational projects, including biodiversity topics (uses, management, conservation), environmental education, space/territorial tools (GIS), environmental assessments (methodologies, interpretations), among others.

Sustainable projects

We design projects that are environmental respectful and socially fair, creating spaces that are healthy, economically viable and sensitive to the social needs of our target audience.

SERVICES

Geographic information system

We offer services of cartography, photogrammetry and geodesy, image management, aerial photography, analysis for land use planning, environmental sensitivity and landscape.

Sociocultural services

We provide agricultural, health, opinion and perception studies; mapping and analysis of interest groups, community consultations and citizen participation, design, evaluation, monitoring and supervision of social programs. Also, we know the great potential of our cultural heritage, and perform archaeological diagnoses. Our professionals elaborate, present and execute AAPs and ARPs (with and without excavations), ARP, EP, AMP, valuation of archaeological sites, inventories of archaeological and historical movable properties, as well as archaeological management plans.

SERVICES

Environmental Consultancy

We perform studies of Baseline, AD, Business intelligence smart GIS, Environmental Management Plans, Contingency Plans, Security and Risk, for the environmental, biological and sociocultural component.

Biological Aspect: We describe the ecosystems and their components to identify, quantify and evaluate the potential impacts of the actions of any project to which they can be submitted. We prepare sustainable management and monitoring plans.

Social Aspect: We characterize the target population of the project and work on the socialization of development projects and participatory workshops. We design and evaluate Community Relations Plans as well as CNEARs.

Physical Aspect: We characterize the environmental variables (water, air, soil, noise) as well as the hydrological, geological, agricultural components, among others.
